

Logic Tools - EPA Overview

This segment of the program provides for both company and government mandated record keeping for chemical, fertilizers and general hazardous chemical information.

This segment provides features and functionality to;

Product Inventory – Provides for recording of any product purchased and used either internally or a client site. The manufacturer, product, quantity, expiration date, serial numbers and other identifying codes can be recorded and maintained.

Applications – Any application of an inventoried product can be recorded. All pertinent information relative to the application such as where, what, when, how much, who, etc. can be retained.

Reports – A complete reporting system is available. Inventoried products and where used are available for retrieval upon request.
